

BC Wildfire Service (BCWS) - Client Evaluation of Stin's Project

Answered Problem Sections : 5/5

He answered both parts of my proposal and completed both the EDA and prediction task. He used real numbers to show why Options A and B were less supported before moving into Option C, then built the model I asked for using location, season, and ecozone.

Technique Judgment : 5/5

He correctly framed this as supervised classification since fire cause is a known label, and actually justified the approach instead of simply doing what I suggested.

Evaluation/Interpretation Quality : 4.5/5

The metrics connected really well to my main goal, especially the focus on recall for HUMAN-caused fires. I just would have liked a little more detail on the specific regions and seasons BCWS should target.

Communication : 4.5/5

The notebook and presentation were easy to follow overall, and he explained the practical meaning behind his results. Some of the model and ROC-AUC discussion got a little technical for a non-technical stakeholder, though.

Open-ended Feedback:

Overall, I think Stin did a really good job with my proposal and understood what I was asking for. I especially liked that he compared multiple models and improved on the first model after seeing that it was missing too many human-caused fires. His final results connected back well to the actual goal of helping BCWS make better decisions about prevention resources. I also appreciated how he took my feedback from our check-in into consideration throughout the analysis. Overall, I was happy with the final solution and thought he handled the project really well!
